Japanese wheat production plan envisages increase of 15,000,000 bushels in next five years. Production now averages about 30,000,000 bushels annually. Estimated to require expenditure of 10 million yen (\$5,000,000 at par and \$2,388,000 average exchange week ended May 20, 1933). Experiment stations working on wheat strains to replace foreign wheat now mixed with domestic wheat. (Radiogram from Agricultural Commissioner Dawson, Shanghai, May 22, 1933.)

Bulgaria grain sowings, in acres, 1933 with 1932 figures in parenthesis: Wheat, 3,002,000 (3,007,000); rye, 526,000 (544,000); barley 576,000 (568,000); oats 306,000 (281,000); Rainfall was favorable during second half of March. (International Institute of Agriculture, Rome, May 23, 1933.)

Southern Rhodesian corn estimates, European growers, 1932-33 with 1931-32 figures in parenthesis: Area, acres, 253,000 (255,000); production, bushels, 4,113,000 (5,714,000). (Agricultural Attache C. C. Taylor, Pretoria, May 26, 1933.)

BREAD GRAINSSummary of recent bread grain information

The addition of the small county, Luxemburg, and the spring wheat area in Sweden to the previously report wheat area is 25 countries reported for 1933 brings the total to 184,970,000 acres compared with 194,375,000 acres a year ago. This indicates a reduction of about 5 percent from last year in the area for harvest and 7 percent if the Russian winter wheat acreage is included. The pace of spring grain seedings in Russia has slackened in the Volga and Western Siberia regions and improved somewhat in Ukraine and North Caucasus, although the latter is still behind last year's backward sowings. Sowings on individual peasant farms is reported very backward. Total Russian grain sowings on May 10 were 105,000,000 acres compared with 78,397,000 on the same date in 1932 and 88,462,000 acres in 1931. The revised 1933 spring plan of Russian grain sowings is 234,745,000 acres of which 57,000,000 acres is planned for spring wheat. Seedings in Argentina are progressing under very favorable weather conditions while in the main producing wheat areas in east and parts of south Australia rainfall continues inadequate for soil preparation, seeding or germination.

The second estimate of the production of wheat in Punjab, India which usually accounts for about 40 percent of the total Indian crop is 118,203,000 bushels. This is an increase of over 8,000,000 bushels from the first estimate and is now about the same as last year's crop. The estimate of the area in the Punjab for the present season has been increased from 9,548,000 acres to 10,066,000 acres. See table page 626. Bread grain crop conditions continue rather favorable in most European countries though the season is somewhat late in many districts due to cold, dry weather. Crop prospects in Portugal are reported above normal.

World wheat shipments for the week ended May 22 amounted to a little over 12,000,000 bushels or about the same as for each of the past 4 weeks. The North America movement at 6,765,000 bushels, however, was the largest since early January and exceeded the combined shipments from other countries. Small shipments from the Danube Basin occurred while Russia is reported to have purchased some additional quantities of wheat. For weekly export table, see page 634.

European market conditions

Continental European import markets were mostly quiet and prices were sustained during the week ended May 18, according to radioed advices from Agricultural Attaché Steere at Berlin. Holland prices were firm until the last half of the week when a slight decline occurred. No change in prices and only a small amount of business was reported in France. Prices were steady as a result of low domestic stocks and small offers in Czechoslovakia.

## C R O P   A N D   M A R K E T   P R O S P E C T S ,   C O N T ' D

-----

Demand for both domestic and foreign wheat was lively. The market in Austria was quiet with prices steady and some business in foreign wheat was reported. Small offers and unsatisfactory flour business following a short revival resulted in a quiet market in Germany. Prices strengthened somewhat during the last part of the week, however.

-----

## F E E D   G R A I N S

Summary of recent feed grain information

The barley area sown for the 1933 harvest in 17 countries so far reported, including the first estimate for Luxemburg and slight revisions in the previous estimates for Spain and Syria and Lebanon, totals 33,725,000 acres, which is a decrease of 4.5 percent from the area sown in those countries last year. The European countries show a decrease of nearly 6 percent, and the North African countries a decrease of 7.5 percent.

The oats area in 11 countries so far reported totals 60,117,000 acres, which is more than 2 percent below the area sown in those countries in 1932. The first estimates of the acreage in Spain, Luxemburg, and Syria and Lebanon are 1,599,000 acres, 69,000 acres, and 28,000 acres, respectively, compared with 1,926,000 acres, 74,000 acres, and 28,000 acres a year ago.

The 1933 area planted to corn in Czechoslovakia is estimated at 338,000 acres, which is an increase of about 2 percent over the area of last year, but is 2 percent below the average acreage during the past five years. The May 1 condition of the barley and oats crops in Czechoslovakia was somewhat below average, having been delayed about 3 weeks on account of cold and drought, with damage from night frost. In Poland the May 5 condition of winter barley was a little below average, but slightly above that of last year. There has been some deterioration due to cold weather and insufficient moisture. In Switzerland the May 1 condition of the winter barley crop was about average, while the oats condition was slightly below.

The weather during the middle of May was favorable for the conditioning and shipping of the new corn crop in Argentina. Exports during the week ended May 20, as well as during the preceding week, amounted to more than 5,000,000 bushels. For tables showing feed grain trade and prices, see page 628.

## C R O P   A N D   M A R K E T   P R O S P E C T S ,   C O N T ' D

## RICE

Japanese rice stocks exceed last year

Total stocks of cleaned rice in Japan on May 1, 1933 reached 11,457,000,000 pounds against 10,329,000,000 pounds on the corresponding 1932 date, according to cabled advices from Agricultural Commissioner O. L. Dawson at Shanghai. Stocks of domestic rice, representing most of the supplies on hand, were 10.7 percent larger than last year. Stocks of Korean rice were down 25.3 percent but stocks of the Formosa product were up 15.6 percent. The latter is the smallest item in the rice supplies from Japanese Empire sources. The 1933 stocks figure for foreign rice was 45 percent below the 1932 level. It is estimated that in the period May-October 1933 about 1,056,000,000 pounds of rice will be imported into Japan, largely from Korea. Consumption for the same period is placed at 10,272,000,000 pounds, indicating a probable carryover on November 1933 of 239,000,000 pounds. See page 629 for stocks table.

## COTTON

World cotton production reduced in 1932-33

The preliminary estimate of the 1932-33 world cotton production is now placed at 24,000,000 bales of 478 pounds compared with 27,500,000 bales in 1931-32 and 25,800,000 bales in 1930-31, according to the Bureau of Agricultural Economics. The current figure is the smallest estimated world production since 1923-24 with the exception of 1927-28 when the estimated total was also 24,000,000 bales. While the world production in 1932-33 is estimated to have declined 3,500,000 bales or 13 percent, the United States production dropped 4,100,000 bales, or almost one-fourth. The larger crops in China and India partially offset the decline in the domestic crop. The increases in the Indian and Chinese crops were due largely to more normal yields this season, the yields of 1931-32 being unusually low. However, the estimated harvested acreage in China increased considerably due to the fact that in 1931-32 the acreage was materially reduced by floods. The decline of almost 40 percent in the Brazilian crop resulted from a severe drought in the northern States, which reduced the yields to the lowest levels for many years. The 1932-33 Brazilian crop was the smallest since 1916-17.

The present estimate of the 1932-33 world acreage of 77,400,000 acres represents a decrease of 3,400,000 acres or only 4.2 percent from that of 1931-32. This is, however, the smallest world acreage since 1927-28 and was 9.0 percent below 1929-30 and 10.7 percent below the record acreage of 1925-26. These world estimates are based on the revised United States acreages and for that reason are not comparable with previously published world acreage

## CROP AND MARKET PROSPECTS, CONT'D

estimates. The greatest decrease in the 1932-33 acreage occurred in the United States, India and Egypt. The 35 percent decline in Egypt's acreage was to a considerable extent the result of an acreage restriction law.

Cotton trade activity slowing up

Demand for raw cotton at Liverpool was very moderate during the week and prices of all descriptions on May 19 were about a half-cent under those of the previous week. Trading in American cotton was very quiet; American middling was quoted at 9.64 cents per pound or nearly a cent and a half above Indian Broach. This price spread is now double the American-Indian price spread which has prevailed until recent weeks. The tone of the market appeared uncertain and awaiting political and weather developments. At Manchester spot demand was fair while the yarn and cloth market was quiet with sales to India and China very small. Big contracts in Egyptian yarn, however, are said to have been arranged for Europe. Demand at Bremen was moderate for medium and better grades. Less demand from spinners occurred with the recent decline in the market. On the Milan market there was less demand for both spot and c.i.f. cotton. The yarn and cloth market was also poor and reduced activity is expected before long unless demand improves. A better demand at Havre was reported due to the seasonal increase in production for immediate or near month delivery. Most spinners are said to be many months behind the usual time of covering new crop requirements in spite of very small stocks of raw or manufactured goods.

Reviewing the continental European textile situation for the month ended May 8, Agricultural Attache L. V. Steere at Berlin cites American currency developments as the outstanding feature. The departure of the dollar from the gold standard and the resultant increase in dollar prices of raw cotton, did not have a uniform reaction on all markets. Generally speaking, however, new purchases of raw cotton, price-fixing, and sales of cotton yarn and goods were of fair volume. German trade was rather active throughout the month, but business in southern Europe remained quiet. France and Belgium complained of slow new orders early in the month, followed by periods of improvement, becoming irregular in view of currency uncertainties. There was little change in the general rate of European cotton textile mill activity, with aslight increase seen for Germany. Conditions in Austria and Czechoslovakia remain bad, however, with Belgium also issuing pessimistic reports.

## FRUIT, VEGETABLES AND NUTS

Fair apple crops indicated for northern Europe

Early season prospects indicate a fair apple crop for 1933 in northern European countries such as Germany, Switzerland, Holland, and Belgium, where production was light last year, according to D. F. Christy, Assistant

## C R O P   A N D   M A R K E T   P R O S P E C T S ,   C O N T ' D

-----

Agricultural Commissioner at Berlin. Apple crops smaller than last year are anticipated in Austria and Italy, the important apple exporting countries of Southern Europe. Prospects for pears and stone fruits, particularly apricots, are considered to be rather poor. Frost damage is mainly responsible for the unfavorable outlook for pears and stone fruits. Blossoming was late this year. Below-zero temperatures, however, occurred during the first half of April over most of the Continent. The fruit trees in the surplus producing sections of Czechoslovakia, Switzerland, southern Germany, and the Italian Piedmont were damaged by the cold. Soft fruits suffered most but apples may also have been affected. Frost and drought damage has been reported from the Northern and Eastern sections of France where apples and pears are important crops.

-----

LIVESTOCK, MEAT AND WOOL

Danish hog numbers decline

Hog numbers in Denmark on April 18, 1933 were estimated at 4,376,000 head, a decrease of 4 percent compared with the January estimate and 10 percent as compared with that of June 1932. The April estimate is not strictly comparable with any taken in preceding years at different times. In Germany and the Netherlands, however, where estimates are available quarterly for a few years, the number in March is usually the lowest of the year. On April 18, 1933 the number of sows in farrow were 9 percent lower than in June 1932. Fat hogs of 4 months and over were reduced 11 percent; pigs 2 to 4 months 16 percent; and pigs under 2 months 4 percent. The number in all of the classes was also smaller at the latest estimate than in November 1932 or January 1933 except in the case of young pigs which were 1 percent higher than at the time of the November estimate. See table, page 629.

-----

DAIRY PRODUCTS

Australian butter exports ahead of last season

A total of 3,866,000 boxes of butter were exported from Australia in the period July 1-May 13, 1932-33, according to cabled advices of May 23 from Agricultural Commissioner E. C. Paxton at Sydney. The current figure is 586,000 boxes in excess of exports for the corresponding 1931-32 period. Figuring 56 pounds per box, the 1932-33 volume works out at 216,000,000 pounds against 183,000,000 pounds for the same period of 1931-32. Australian butter production expanded further during April 1933 as a result of the beneficial rains experienced in important areas. Stocks are reported as still heavy and producers are urging the passage of control legislation.

-----

## INTERNATIONAL INSTITUTE OF AGRICULTURE ANNOUNCES NEW YEARBOOK

The 1931-32 edition of the "International Yearbook of Agricultural Statistics" is now available, according to a recent announcement by the International Institute of Agriculture at Rome. The volume contains 800 pages and is divided into three sections. The first section contains area and population figures for the years nearest to 1927 and 1931 for 208 countries. In the second section there are tables for nearly 50 countries covering land utilization, agricultural production, livestock numbers and production of livestock products. The third section presents tabular material on nearly 40 agricultural products covering area, production and yield per acre in all countries for which figures are available for the years 1928 to 1931. Similar data for livestock cover the years 1927 to 1931. There are included also trade and price tables covering the movement of the leading commodities in world agricultural trade. A separate volume on forestry statistics will appear later.

In addition to presenting detailed figures for all reporting countries, the production and trade tables also carry totals by Continents and by hemispheres. This arrangement facilitates the visualization of broad variations in crop areas, production, and movement. The part of the yearbook devoted to prices contains weekly quotations on 25 agricultural products in the leading world markets for the period January 1927 to July 1933. In the ocean freights section there are presented rates covering the carriage of wheat, corn and rice on the most important shipping routes. In the fertilizers section 15 products are covered by figures on production, trade, consumption and prices. In the appendix there are carried also special chapters on the distribution of agricultural holdings according to size and mode of tenure.

Statistics on forestry have been augmented and will be published in a separate volume under the title: International Yearbook of Forestry. Additional information on both yearbooks may be secured by addressing the International Institute of Agriculture, Villa Umberto I, Rome, Italy.

## UNITED STATES AGRICULTURAL EXPORTS DECLINE FURTHER

During the month of April, United States exports of farm products continued on the downward trend. The index as based on 44 of the principal farm products stood at 59, one of the seven lowest monthly indexes of the last 19 years. For all products except cotton the decrease was even more pronounced, the index amounting to 51, or 30 points below the April indexes of 1931 and 1932.

Drastic reductions in the exports of wheat and flour were largely responsible for the decrease, the index of which dropped to 20, a new record low. Exports of wheat and flour to all countries during the month of April totaled only 1,754,000 bushels, the major portion of which was sent to countries outside of Europe and went out in the form of flour. For wheat alone,

## UNITED STATES AGRICULTURAL EXPORTS DECLINE FURTHER, CONT'D

exports reached only 194,000 bushels as compared with imports in the same month of 698,000 bushels. Exports of wheat and flour for the ten months ended April 30 amounted to 37,982,000 bushels as compared with 118,880,000 bushels during the corresponding period a year ago or a decrease of 68 per cent.

The index for cotton was 65, a decrease as compared with April a year ago but a gain over the exports of April 1930 and 1931. Though Germany took more cotton during April 1933, all the other leading countries took less, reducing the total for the month to 461,700 bales as compared with 578,200 bales during April 1932, a decrease of 20 percent.

Fruit exports showed more than usual seasonal decline, the index standing at 154, which was below the indexes of the two preceding years for April.

For both cured pork and lard, exports were but little above the previous minimum for April. More leaf tobacco was exported than during any of the four preceding months and also more than during April 1932, larger purchases of bright flue-cured leaf by the United Kingdom and China accounting for most of the increase.
